

Famli App

Famli App

Simplified a family wealth management app by turning complex financial data into clear, intuitive experiences.

About

Famli is a modern wealth management app that helps families understand, manage and grow their wealth in one place. Famli is designed for financially active individuals and families who manage multiple investments and want better clarity, collaboration, and guidance in managing their finances.

Problem

- Financial data scattered across banks, brokers, and apps
- Lack of trust in financial advisors and digital tools
- Limited financial knowledge to make confident decisions
- Limited visibility of family's wealth
- Difficulty tracking spending, taxes, and financial goals
- Reliance on spreadsheets and scattered documents
- Difficulty getting timely financial advice

User Need

"Users lack a single source of truth for their financial lives."

Business Goals

Improve the IA & Usability of app

Current app lacks clarity from navigation & the flows are not intuitive due to which Users are finding it difficult to know what to do on the app.

Redesign the entire app to bring clarity & trust

The existing app has too much noise, colors and there is lot of design inconsistency on each page which leads to lack of trust to view sensitive data on the app.

Design for Scalability

Think of app from long term perspective & make reusable components.

User Persona

Primary Users: Age 30-45 yrs

- Working professionals with growing investment portfolios
- Families managing joint financial responsibilities
- Individuals tracking assets across multiple platforms
- Users seeking guidance without relying entirely on advisors

My Role & Responsibilities

Strategic

- Set the foundational design principles for the product
- Set the vision for the entire app as to how this app will scale with the future roadmap.
- Defined a scalable design system

Tactical

- Hands-on Design & Prototyping
- Redesigning the flows to make it more intuitive
- Reduce clutter & noise caused by poor design choices

- Restructured Figma file for smooth developer handoff

Research

Qualitative Research

A user research team was hired to conduct qualitative interviews to understand how people manage money and what prevents them from making better financial decisions.

Key Insights from Research

- People want clarity, not complexity
- Users trust human advisors more than pure AI
- Families want selective sharing of financial data
- Most users want guidance, not just dashboards
- AI should assist research, not make decisions

Key Features Identified

Based on the insights got from Research, Product & Business team created a roadmap of the features that needed to be developed as a part of MVP to go LIVE.

One View of Money

Powered by India's Account Aggregator (AA) framework — consent-based, revocable data sharing that puts users in the driver's seat.

- Net worth(Assets & Liabilities) updated automatically with user's consent
- Insurance covers auto fetched
- No account migration - keep all existing institutions
- Most users want guidance, not just dashboards

- Consent can be revoked anytime with one tap

Portfolio Insights

Clarity of performance, risk and exposure

- Risk signals including concentration alerts
- Simple action items with rebalancing checklists
- Fund overlap identification & diversification indicators

Family Sharing

Add Family. Share at ease. Plan together

- Permission-based family sharing
- Joint financial planning and goals
- Reduced dependency on a single family member

AI Research Buddy

An AI companion that helps the users make sense of money decisions.

- Plain-language financial explanations
- Investment comparisons and insights
- Goal-based financial checklists

Goal Based Investing

Set financial goals and stay on track with smart investing.

- Track progress for major life goals
- Portfolio rebalancing suggestions
- Investment recommendations aligned to risk profile

Outcome

We built a scalable design system and revamped the entire app to make it intuitive and trust worthy

Intuitive & Clear Decision Making

Beta Users who used the new app build found the app very intuitive & were able to the tasks much faster.

User Trust & Clarity

Removing noise on the app, making the design consistent and adding trust markers across key touch points significantly brought trust to users.

User Control & Guidance

Users got a sense of control with consent based features for linking via account aggregators & asset sharing to groups
