Phlebotomist App

Revamped Order Tracking & Order Creation Flows to reduce support cost & improve adoption

Platform	Duration	Project Involvement
Web / Mobile App	12 weeks Jun 2023	Design Manager

About

Thyrocare Franchises are collection centres which collect samples from multiple sources like clinics, labs, doctors etc. and send to thyrocare labs for report generation. Thyrocare provides test reports at affordable cost to the labs.

Problem

- Legacy system, Multiple apps doing same thing.
- High support cost as Order tracking is at vial level.
- Low adoption among franchise due to slow system & poor ux.

Business Objective

- Deprecate all apps & merge them into one app.
- Make the Design simple & easy to use.
- Have a seamless ordering experience.
- Reduce inbound customer support cost.

My Role

Design Manager, 1 Lead Designer, 1 PM, Engineering Lead, 2 Engineers, 1 QA

This was a mammoth project as it was a 15 year old legacy system. It was a huge cross functional effort with PM, Business, Operations & Engineering team.

I was responsible from design strategy & planning in terms of how to execute the project phase wise. I and lead designer collaborated with PM's & Operations team to speak to franchises & also based on support queries understood pain points of users.

Key Insights from Research

Material Order

Franchise orders barcoded vials once a month from thyrocare for tracking. These are sold to Hospitals & Clinics.

LME (Delivery Boy)

Visits avg 2-3 times in a day to collect samples. Timings: 9 am, 1.30 pm, 4 pm

Franchise Staff

4 People. 1 Owner & 3 Staff. 2 People go for home collection, 2 stay for Direct Patients coming to visit franchise.

Order Status

Lack of visibility of Order status & Report release queries as this is at a barcode level.

Top Competitors

GD Diagnostics, Apollo, Metropolis, Lal Pathlabs, Medall.

Order Execution

Only **78% of orders are fulfilled** : customer unavailability, location far.

Platform & No. of Vials

60% use Cliso app v/s 40% use web. Avg 15-20 vials per daily. 14 Home | 6

Need ways to improve business

Need website, need repeat customer lists who are due & social media presence

DPS.

Solution

Build features that will reduce support tickets, improve overall user experience which will lead to increase in adoption among franchise partners

Order List

There was no order list page & order tracking was at a barcode level. We made an order list page with patient data at an order level to give visibility of orders to franchises.

Order Management

Showing different states of vials & different order statuses at an order. The same set of widgets are reused on mobile as well.

Work order Entry

~5% orders showed up at the lab with work order entry which affected report TAT. We revamped this page to make it simple & intuitive.

Outcome

Reduction in Inbound Queries

Customer Escalations went down to **3.64% from 5.5%** roughly by ~35% with features (merge report, order status, cancelled test & partial report)

Efficiency Gains & Adoption

WOE time reduced to **1.5 mins from 4 mins** leading to efficiency & better adoption among franchise / ILS Partners

Improved NPS

Initiatives like Cancel test, merge report, Partial reports & order list, details improved NPS to 65 from 48
